

## EXPERIENCE

---

### • Gigaforce Private Limited

Senior Software Engineer - AI/ML

Noida, India

October 2022 - Present

- o Leveraged expertise in US insurance claims data **identify and maximize subrogation potential, resulting in a 30 percent increase in revenue** for clients
- o **Collaborated with subject matter experts to incorporate domain knowledge and tailor subrogation process** to meet specific client needs
- o **Applied natural language processing techniques to understand context** and accurately determine parties at fault in loss descriptions, optimizing subrogation outcomes.
- o **Fine-tuned open-source large language models**, including Rejpyjama, using the **LoRA framework** to improve their performance in the insurance domain.
- o **Generated and curated fine-tuning data** specifically tailored for the insurance domain to enhance the training of the large language models.
- o Implemented **digitization of insurance claims documents** to streamline information extraction and improve overall claim process
- o Designed and **developed scalable, efficient ingestion pipelines** to integrate predictive model output into databases
- o Created and **implemented architecture for various products** to ensure proper monitoring and scalability
- o **Developed and applied advanced algorithms** for subrogation opportunity identification, harnessing the capabilities of fine-tuned large language models.
- o **Built and maintained strong relationships with clients and subject matter experts** to understand and meet their unique business needs

**Technologies:** Python, SQL, Tensorflow, Scikit-Learn, Pytorch, Docker, GCP, Spacy, Word2Vec, Large language models.

**Theory:** Data Preprocessing, Statistical Modeling, Deep Learning, Linear Algebra, NLP.

### • Navia Life Care

Machine Learning Engineer

Gurgaon, India

August 2019 - September 2022

- o Led the development and **implementation of an ETL pipeline using PostgreSQL and Django**, including a reporting system and data visualizations using HTML, CSS, and JavaScript
- o Built an **end-to-end system for collecting and labeling doctor's handwritten prescriptions**, achieving a **90 percent accuracy rate in offline recognition**
- o Leveraged collected data to enhance **handwriting and character recognition on doctor's prescriptions** through the utilization of CNN, RNN, and CTC techniques
- o **Implemented personalized recommendation models for doctors** based on usage data
- o Contributed to the **development of a Clinical Decision Support System** for the EHR system using SNOMED CT Database and healthcare data
- o **Created data pipelines and automated the reporting process** and data management for thousands of doctors and millions of patients
- o **Developed APIs** for insights and analytics dashboards for doctors
- o Led the design and implementation of architecture for various products to ensure scalability and proper data reconciliation

**Technologies:** Python, SQL, Django, Tensorflow, Docker, GCP, AWS, Javascript, MongoDB.

**Theory:** Data Preprocessing, Statistical Modeling, Deep Learning, Linear Algebra, NLP, Recommendation systems.

## EDUCATION

---

- **Guru Gobind Singh Indraprastha University**  
**B.Tech. Computer Science and Engineering (7.37 CGPA)**

New Delhi, India  
July. 2015 – June. 2019

## CERTIFICATIONS

---

- **Applied AI Course**

## PROJECTS

---

- **Building a Machine Learning Pipeline for Image Classification using Apache Kafka and Neural Networks**
  - Developed a machine pipeline using Apache Kafka for classifying fashion clothing images using deep neural networks
  - Utilized the MNIST Fashion dataset for training a convolutional neural network
  - Built a complete pipeline for the application using Kafka, including a producer to generate predictions and a consumer to consume the outputs
  - Created a retraining pipeline by setting a threshold for predictions and retraining the model
  - Utilized Hyperopt for hyperparameter tuning of the models
- **Development of a Captcha Solver using Computer Vision Techniques**
  - Developed a captcha solver using computer vision techniques, including image preprocessing, thresholding, and contour detection
  - Implemented a convolutional neural network to recognize individual characters within the captcha
  - Utilized the OpenCV library for image processing and contour detection
  - Improved captcha solving accuracy through the use of image preprocessing techniques and neural network training
  - Created a end-to-end pipeline for solving captchas using the developed model
- **Development of a Facial Detection and Recognition System using OpenCV and Machine Learning Algorithms**
  - Designed and implemented a facial detection and recognition system using Python and the OpenCV library
  - Utilized Haar cascade classifier for facial detection in images
  - Constructed a dataset of facial images by capturing them through a laptop webcam
  - Implemented multiple classification algorithms like EigenFaces, FisherFaces, and LBPHFaces for recognizing faces in the dataset
  - Developed a script to perform live facial detection and recognition through a laptop webcam

## ACHIEVEMENTS

---

- Kaggle Expert
- Achieved top 40 ranking out of 6000 students in the ZS Data Science Challenge 2018.

## OTHER PROGRAMMING TOOLS

---

- **Cloud services:** AWS(EC2, S3), GCP.
- **Deep learning frameworks:** Keras, Tensorflow, Pytorch.
- **Database:** PostgreSQL, MongoDB, ElasticSearch.
- **Python:** numpy, pandas, sci-kit, django.
- **Webserver:** Gunicorn, Apache, Docker, Kafka.
